

I am opposed to any restrictions placed on XM satellite radio concerning the broadcast of weather and road conditions in various cities throughout the United States. I find this service valuable not only in my own area, but when I travel as well. The traffic information and weather conditions are extremely useful in planning my route in real time as I travel. I listen to the XM broadcasting exclusively now because they provide the type of programming I cannot find elsewhere. Why do think that I am willing to pay for the service as opposed to free radio as an alternative? Please reject National Association of Broadcasters petition 04-160. Thank you in advance for your attention to this matter.
